Elite Technical: LinkedIn Outreach Update

Prepared by Algo Acquisition for Joseph Monaco. Results as of November 6, 2026, 6:50 AM Central Time.

At a glance

- **898 connection requests** sent so far across 6 campaigns. **88 accepted (9.8%)**, 15 conversations started.
- The campaign built on **live technical hiring** got the most interest: **14.2% acceptance**, about twice the federal contract campaigns (5.9% to 7.6%).
- So we moved everything toward hiring signals. The federal contract and candidate fraud campaigns are paused, and two new **open-role recruiter campaigns** are live, with six more ready to go.
- Reply numbers are still early: 1 reply so far. Most accepted connections were made in the last 4 days and are only now getting the follow-up messages.

What has run so far

Campaign	Who we contacted	Dates	Sent	Accepted	Rate	Convos	Replies	Status
Cleared Talent for New Federal Contracts (v1)	IT and engineering leaders at companies with a new federal award	Oct 30 to Nov 5	73	5	6.8%	3	0	Paused
Cleared Talent for New Federal Contracts (v2)	Same audience, second sender group	Oct 30 to Nov 5	92	7	7.6%	3	0	Paused
Federal Contracts, 12-month awards	Wider award window, 2 to 3 contacts per company	Oct 30 to Nov 5	170	10	5.9%	1	1	Paused
Candidate Fraud in Technical Hiring	Talent leaders at companies hiring remote or hybrid tech roles	Nov 2 to Nov 5	415	59	**14.2%**	7	0	Paused
Recruiter: Cybersecurity Open Roles	Security hiring managers with a live security job post	Live since Nov 5	148	7	Day 1	1	0	**Live**
Recruiter: IT Infrastructure and Support Open Roles	IT hiring managers with a live IT job post	Live since Nov 6	0	0	Starting	0	0	**Live**
Total			**898**	**88**	**9.8%**	**15**	**1**	

Sent = connection requests. Rate = accepted divided by sent. A new campaign starts low because people take a few days to accept, so the Cybersecurity number will rise. Convos = people who received at least one message after accepting.

How we changed strategy

What the first week showed. The federal contract campaigns reached the right companies, but the trigger (a new contract award) did not get much attention: about 1 in 15 people accepted. The candidate fraud campaign, aimed at companies actively hiring technical people, did twice as well, with about 1 in 7 accepting. The companies that respond are the ones hiring right now.

What we changed. We paused the lower-interest campaigns and rebuilt around the strongest signal: a specific, live job post.

- **Every lead is tied to a real job post** at their company, posted in the last 30 days. The first message names that exact role, so it reads as relevant from the first line.
- **We message the hiring manager for that role**, for example the Director of IT for an IT job or the security lead for a security job. A talent leader is used only when no hiring manager can be found.

- **We use a proven sequence.** This open-role sequence produced a **19.4% reply rate** for two other staffing firms we run campaigns for. It is short: a connection request, then three short messages two days apart. The goal of every reply is a short call, where we confirm our candidate really fits the role before sharing their profile.
- **We split by role family** so each message fits the reader: Cybersecurity, IT Infrastructure, Software, Data and AI, Cloud, Enterprise Apps, Electrical and Controls, and Mechanical and Manufacturing.
- **Your rules stay in place**: $100M to $1B revenue, 501 to 10,000 employees, US based, no staffing firms, education, government or nonprofits, and none of your past clients from your do-not-contact list.
- **We check every lead against their live LinkedIn profile before launch.** We removed 142 people who had changed jobs or whose names would not print cleanly in the message.

Why Cybersecurity and IT went first. Three of the five dream companies you named are security firms (Varonis, Tenable, Commvault). Your target titles lead with IT leadership, and your Top Secret facility clearance is a real edge for security hiring.

What is live and what is queued

Campaign	Leads	Companies	Status
Recruiter: Cybersecurity Open Roles	1,402	450	**Live** since Nov 5
Recruiter: IT Infrastructure and Support	2,774	912	**Live** since Nov 6
Recruiter: Software Engineering	4,836	866	Next to launch
Recruiter: Data and AI	2,837	805	Built, queued
Recruiter: Electrical, Controls and Embedded	2,859	607	Built, queued
Recruiter: Mechanical, Manufacturing and Quality	3,675	759	Built, queued
Recruiter: Enterprise Applications (ERP/CRM)	513	230	Built, queued
Recruiter: Cloud and DevOps	406	239	Built, queued

About 19,000 hiring managers in total, at companies with an open technical role posted in the last 30 days. Sending runs at about 190 connection requests a day across 11 LinkedIn profiles, 7 days a week. We launch the queued campaigns one at a time as the live ones work through their lists, so each one gets a clean read.

How replies are handled

When a hiring manager replies with interest, we book a short call. On the call we learn what the role really needs and confirm our candidate is a good fit. The profile is shared after the call, not before. Nothing is needed from you to start this.

A few things that help

- **Tell us about any companies to skip** that are not on your do-not-contact list yet, such as current clients or companies in active talks.
- **Tell us which role families you can fill fastest.** We will move those campaigns up the queue.

Next update: once the two live campaigns have a full week of follow-up messages out.
